## How can we foster cooperation between disciplines, sectors and communities of knowledge?

(1/2)

- through exchange of experiences
- Recording interviews of different stakeholders and communities or sectors, producing diverse archives of knowledge and wide publication to foster awareness and dialogue of different groups of interest.
- More specific training programmes for Data Literacy should be developed and implemented, especially for mid-career scientists. (Ant Türkmen, Ecological Research Society)
- Provide active and participatory stakeholder involvement at national and regional scales
- By defining clear objectives from the ecosystem point of view, jurisdictions are important to delineate competences and the rule of law but cannot be used to limit regional cooperation amongst disciplines, sectors and communities of knowledge
- With more education, training, ...
- Transferring Customed and targeted information for

each discipline and highlighting each discipline's interest in the cooperation and benefits of achieving it

- Finding a common framework to build up interconnected data that is able to provide usable information for decision making and accessible for stakeholders and communities
- Promote and develop the "maritime cluster" concept
- main points are: -encourage a dialogue

between all interest groups - identifying the specific objectives of each one and trying to align them -Encouraging the creation of a common consciousness that makes clear that an ecosystem-based approach is not only preferable, but necessary.

- Develop structured partnerships among scientific research and business and enterprises, in particular with reference to innovation for Blue Economy
